

# Salahaldin Tawafsha

## Full-Stack Engineer

Full-Stack Engineer with over two years of experience building web and mobile applications across Flutter, Python (Frappe), Spring Boot, and Angular. Currently building cross-platform mobile apps with React Native, Node.js, PostgreSQL, and PostGIS, with a focus on clean, efficient, well-tested code.

## EXPERIENCE

**Mobile Full-Stack Developer**

**Jun 2026 – Present**

VNG International

- Building cross-platform mobile applications with React Native, delivering responsive, high-performance UIs across iOS and Android from a single codebase.
- Developed RESTful backend services in Node.js, designing clean API layers and handling authentication, validation, and error handling.
- Designed and optimized PostgreSQL schemas, writing efficient queries and managing migrations for reliable data access.
- Implemented geospatial features using PostGIS for mapping, proximity search, and spatial analysis.
- Integrated offline-first storage with SQLite on the mobile client, enabling local persistence and seamless data synchronization when connectivity is restored.
- Collaborated on API contracts between the React Native front end and Node.js backend, ensuring consistent data models and smooth end-to-end feature delivery.

**Full-Stack Engineer**

**May 2025 – May 2026**

LogesTechs

- Developed and maintained RESTful APIs using Spring Boot and Angular, focusing on scalability, performance, and user experience.
- Designed and optimized MySQL database schemas, mapping them to Java entities and handling data operations with JDBC Templates and advanced MySQL queries.
- Collaborated with the Customer Success team to investigate and resolve production bugs and data issues directly on live environments.
- Worked with caching intermediate data in Redis and orchestrating task scheduling using RabbitMQ.
- Integrated multiple external APIs, including authentication flows and 3PL (Third-Party Logistics) services, ensuring accurate error handling and user feedback.
- Developed and enhanced multiple Angular pages with a focus on responsive design and usability.
- Improved user experience across several existing modules through UI/UX refinements and performance optimizations.

**Mobile Full-Stack Developer**

**Apr 2024 – May 2025**

ERPMax Solutions

- Built and optimized REST APIs using MySQL for integration with Flutter applications.
- Led development of the MaxFlow Distributor App, implementing all screens, and contributing to multiple other Flutter apps.
- Designed local database solutions in Flutter for offline functionality with seamless data synchronization on reconnect.

**Back-End Developer Training**

**Aug 2023 – Sep 2023**

Asal Technologies

- Strengthened Python skills and algorithm knowledge with a focus on time-complexity optimization.
- Consumed existing APIs and developed new REST APIs using the Django framework.
- Implemented unit testing for comprehensive test coverage across all projects.

## EDUCATION

**Bachelor's degree in computer science**

**Sep 2020 – Feb 2024**

Birzeit University

- Graduated with a GPA of 80.1; Honor List, first semester 2020/2021.

## SKILLS

### Front-end Development

- Angular
- React Native
- TypeScript
- JavaScript
- HTML, CSS and SCSS
- Responsive & adaptive UI design
- Flutter
- jQuery
- Bootstrap

### Backend Development

- Node.js
- Spring Boot
- Frappe Framework (Python)
- Django
- RESTful API design & development
- Integration with third-party APIs

### Database Management

- PostgreSQL
- PostGIS
- MySQL
- SQLite
- ObjectBox
- Redis

### Testing

- JUnit
- PyTest
- Debugging and troubleshooting
- Postman

### Tools

- Git
- GitHub
- Bitbucket
- Jira
- RabbitMQ

## LANGUAGES

- Arabic
- English
